Comprehension:

Read the given passage and answer the questions that follow.

The First Wave of Feminism emerged in the late 19th and early 20th centuries as a significant social and political movement aimed at securing basic legal rights for women. It was primarily focused on issues such as women's suffrage, property rights, and access to education. This movement developed in response to widespread gender inequality, where women were largely excluded from political participation and denied legal autonomy. One of the central goals of the movement was the right to vote, which became a powerful symbol of equality and citizenship. Activists organized campaigns, protests, and petitions to demand suffrage. In countries like the United States and the United Kingdom, the movement gained momentum through the efforts of prominent leaders such as Susan B. Anthony and Emmeline Pankhurst. Their advocacy helped bring women's issues into mainstream political discourse. The First Wave was largely driven by middle-class women and often focused on legal reforms rather than broader social change. While it achieved important victories—such as women gaining the right to vote in several countries—it did not fully address issues related to race, class, and working conditions. As a result, its impact was both transformative and limited. Despite its shortcomings, the First Wave laid the foundation for future feminist movements. It established the importance of collective action and highlighted the need for gender equality in public life. Its legacy continues to influence contemporary discussions on women's rights and social justice.

SubQuestion No : 21

Q.21 What is the central theme of the passage?

Ans

A. The economic roles of women in different societies across the world

B. The development and achievements of the First Wave of Feminism

Chosen Option : B

Q.9 Which of the following is a valid declaration for a 2D array in C?

- Ans
- ☒ A. `int a[2][2] = {{1,2}, {3,4}};`
 - ☒ B. `array a[2][2] = {{1,2}, {3,4}};`
 - ☒ C. `int a[][] = {{1,2}, {3,4}};`
 - ☒ D. `int a[2,2] = {{1,2}, {3,4}};`

Chosen Option : A

Q.10 Which statement about left recursion in context-free grammars is accurate?

- Ans
- ☒ A. Left recursion occurs when a non-terminal appears at the end of its own production.
 - ☒ B. Left recursion is required for building LL(1) parsers without any modification.
 - ☒ C. Left recursion can be direct or indirect and may lead to infinite recursion in top-down parsers.
 - ☒ D. Left recursion has no impact on recursive-descent parsing.

Question ID : 4410091433445

Option 1 ID : 4410095662342

Option 2 ID : 4410095662344

Status : Answered

Chosen Option : C

Q.13 Which of the following statements correctly differentiates connection-oriented from connectionless services?

Ans ☐ A. Both perform error checking and retransmission.

☐ B. Connectionless has higher overhead; connection-oriented has minimal.

☐ C. Connection-oriented sends data without a connection; connectionless requires one.

☒ D. Connection-oriented ensures reliability and order; connectionless may not.

Question ID : 4410091358661

Option 1 ID : 4410095366807

Option 2 ID : 4410095366806

Q.14 LR Parsing is known for being:

Ans ☒ A. Non-deterministic always

☒ B. Bottom-up parsing

☒ C. Left-recursive only

☒ D. Top-down parsing

Question ID : 4410091381377

Option 1 ID : 4410095456710

Option 2 ID : 4410095456711

Option 3 ID : 4410095456709

Option 4 ID : 4410095456708

Status : Answered

Chosen Option : B

Q.15 Which of the following statements correctly describes Isolation and Transaction Isolation Levels in a database system?

Statement-1: Ensuring the isolation property is the responsibility of a component of the database system called the concurrency-control system.
Statement-2: The isolation levels may be Serializable, Repeatable read, Read committed, Read uncommitted and all the isolation levels additionally disallow dirty writes, that is, they disallow writes to a data item that has already been written by another transaction that has not yet committed or aborted.

Ans ☒ A. Statement-1 is True and Statement-2 is True

☒ B. Statement-1 is False and Statement-2 is True

☒ C. Statement-1 is False and Statement-2 is False

☒ D. Statement-1 is True and Statement-2 is False

Question ID : 4410091357939

Option 1 ID : 4410095363920

Option 2 ID : 4410095363918

Option 3 ID : 4410095363919

Option 4 ID : 4410095363917

Status : Answered

Chosen Option : B

Q.16 Consider the following grammar G:

$E \rightarrow TE'$
 $E' \rightarrow +TE' \mid \epsilon$
 $T \rightarrow FT'$
 $T' \rightarrow *FT' \mid \epsilon$
 $F \rightarrow (E) \text{ id}$

Which of the following statements about top-down parsing of grammar G is true?

- Ans ☒ A. The grammar is suitable for LL(1) (predictive) parsing and does not require backtracking.
- ☐ B. The grammar is left-recursive and hence cannot be used for top-down parsing.
- ☐ C. The grammar requires backtracking since FIRST and FOLLOW sets of E' overlap.
- ☐ D. The grammar is not left-recursive and can be parsed using a predictive (LL(1)) parser.

Q.27 Consider a finite state transducer (FST) with $Q = \{q_0, q_1\}$, $\Sigma = \{0, 1\}$, $\Gamma = \{a, b, c\}$, initial state q_0 , and the following transitions:
 $\delta(q_0, 0) = q_1$, $\delta(q_0, 1) = q_0$
 $\delta(q_1, 0) = q_0$, $\delta(q_1, 1) = q_1$
 and output function:
 $\theta(q_0, 0) = a$, $\theta(q_0, 1) = c$
 $\theta(q_1, 0) = b$, $\theta(q_1, 1) = a$
 What will be the output string for the input 1010?

Ans ☒ A. caab

☒ B. abac

☒ C. caba

☒ D. acab

Q.31 Consider a Mealy machine designed to process a sequence representing the presence of mineral samples ('M') and non-mineral samples ('N') during a geological survey. The machine outputs 'A' when the current sample is 'M' and the previous sample was 'N', otherwise it outputs 'B'. Which description below correctly reflects the machine's output behavior?

Ans ☐ A. It changes output only when the input switches from 'M' to 'N'.

☐ B. It produces output based only on the current input symbol.

☐ C. It waits until the next transition to output a value.

☒ D. It produces output based on both the current input and the previous state.

Q.48 Which of the following is a necessary condition for a function $f: A \rightarrow B$ to be invertible?

- Ans
- ☒ A. f must be only one-to-one
 - ☒ B. f must be only onto
 - ☒ C. f can be neither one-to-one nor onto
 - ☒ D. f must be both one-to-one and onto

Status : Answered

Chosen Option : D

Q.49 In computer networks, what is the primary difference between a service and a protocol?

- Ans**
- ☒ A. Both service and protocol define how operations are performed.
 - ☒ B. A service defines what operations are provided; a protocol defines how they are performed.
 - ☐ C. A service is used by lower layers, while a protocol belongs to higher layers.
 - ☐ D. A protocol defines what operations are performed; a service defines how they are performed.

Question ID : 4410091480341

Option 1 ID : 4410095848452

Option 2 ID : 4410095848450

Option 3 ID : 4410095848453

Option 4 ID : 4410095848451

Status : Answered

Chosen Option : B

Q.50 A logistics company manages a tracking system where each package ID is stored in a chronological list as the packages are processed. An engineer suggests that, to locate a particular package's ID, the system should check each ID sequentially from the start until the target is found or the list ends. Which statement most accurately reflects the main drawback of this approach if the company expects the number of packages to increase dramatically over time?

- Ans**
- ☐ A. The time to search for any package ID will stay about the same, regardless of list size.
 - ☐ B. Finding a package ID will become faster as the number of packages increases.
 - ☐ C. The memory needed to store package IDs will remain constant even as the list grows.
 - ☒ D. Search time grows linearly with the number of packages.

Question ID : 4410092215498

Option 1 ID : 4410098718133

Option 2 ID : 4410098718131

Chosen Option : D

Q.51	Which of the following statements best distinguishes the relationship between a service and a protocol in a layered network architecture?
Ans	☒ A. A service is the physical implementation of a protocol; thus, changing the protocol automatically changes the provided service.
	☒ B. A service specifies what operations a layer offers to the layer above, whereas a protocol defines how peer entities within the same layer communicate to provide that service.
	☒ C. A protocol defines the interface between two adjacent layers, while a service specifies the message exchange rules between peer entities.
	☒ D. Both services and protocols define the message formats and meanings used between the same layer entities, but at different abstraction levels.

Q.53 Which statement correctly defines the regular expressions?
 Statement-1: Regular expressions representation doesn't involve a combination of strings of symbols from some alphabet Σ , parentheses and the operators +, $\times$, and *.
 Statement-2: A regular expression is not obtained from the symbol $\{a, b, c\}$, empty string ϵ , and empty-set Φ perform the operations +, $\times$ and * (union, concatenation and Kleene star).

- Ans**
- ☒ A. Statement-1 is True and Statement-2 is True
- ☒ B. Statement-1 is False and Statement-2 is True
- ☒ C. Statement-1 is True and Statement-2 is False
- ☒ D. Statement-1 is False and Statement-2 is False

Chosen Option : A

Q.56 A botanist creates a digital representation of a rare plant's evolutionary tree, where each node records a unique genetic mutation. During research, they need to extract the chronological sequence of mutations as they would naturally occur along the main lineage. Which traversal algorithm, when applied to the tree, most accurately reflects the order of these mutations if left sub-branches represent earlier side mutations and right sub-branches represent later side mutations?

Ans ☐ A. A preorder traversal starts with the main mutation, missing proper side branch sequencing.

☐ B. Level order traversal groups mutations by depth, not by evolutionary chronology.

☐ C. Applying a postorder traversal lists mutations from leaves to root, not main lineage order.

☒ D. Performing an inorder traversal yields the desired mutation sequence along the main lineage.

Chosen Option : B

Q.59 Which statement best describes both an advantage and a disadvantage of Insertion Sort?

- Ans
- ☐ A. Fastest sorting algorithm for all inputs but requires excessive auxiliary space, making it unsuitable for memory-limited systems.
- ☐ B. Performs optimally for any input type but lacks stability, failing to preserve the relative order of identical elements.
- ☐ C. Guarantees logarithmic time for sorted inputs but remains inefficient for small datasets as its complexity stays $O(n^2)$.
- ☒ D. Efficient for nearly sorted data due to adaptability but impractical for large datasets due to $O(n^2)$ complexity.

Question ID : 44100944938

Option 1 ID : 441009178974

Q.67 Given a code snippet in C programming language as follows:

```
int a = 10;
int *p;
int **w;
p = &a;
```

which statement correctly assigns the address of 'p' to 'w'?

- Ans**
- ☒ A. w = &&a;
 - ☒ B. w = &p;
 - ☒ C. w = p;
 - ☒ D. w = *p;

Chosen Option : A

Q.73 You are tasked to construct a binary search tree (BST) from a stream of incoming sensor readings, where each reading is processed as it arrives. Midway, the sensor malfunctions and emits a duplicate reading not originally in the stream. To preserve BST properties and ensure efficient future search operations, which strategy should you employ for the duplicate reading?

- Ans**
- ☐ A. Allow the duplicate in the left subtree and continue
 - ☐ B. Replace the existing node with the duplicate value and continue
 - ☒ C. Ignore the duplicate and continue inserting unique values
 - ☐ D. Allow the duplicate in the right subtree and continue

Q.74 What will happen if a process with a higher priority arrives in the ready queue in preemptive scheduling algorithm?

- Ans**
- ☐ A. The scheduler compares the total execution times of all processes.
 - ☐ B. The CPU switches to the new process only if it has a smaller burst time.
 - ☒ C. The currently running process is immediately removed from the CPU.
 - ☐ D. It pauses for the current process to finish its CPU burst.

Question ID : 4410091337130

Option 1 ID : 4410095280290

Option 2 ID : 4410095280289

Status : Answered

Chosen Option : D

Q.75 Which of the following options about non-preemptive scheduling is incorrect?

- Ans** ☒ A. Round Robin is classified as a non-preemptive scheduling algorithm.
- ☐ B. In non-preemptive scheduling, the CPU is relinquished only when a process terminates or initiates an input/output operation.
- ☐ C. Non-preemptive scheduling can lead to process starvation.
- ☐ D. In non-preemptive scheduling, the response time and waiting time are generally not equal for all processes, and in most cases, waiting time is greater than response time.

Q.78 Identify the correct option for project operation in relational algebra:
Statement-1: The project operation is a binary operation that returns its argument relation, with certain tuple left out.
Statement-2: The result of the PROJECT operation can be visualized as a horizontal partition of the relation into two relations: one has the needed rows (tuples) and contains the result of the operation, and the other contains the discarded rows.

Ans ☐ A. Statement-1 is True and Statement-2 is True

☒ B. Statement-1 is False and Statement-2 is False

☐ C. Statement-1 is True and Statement-2 is False

☐ D. Statement-1 is False and Statement-2 is True

Chosen Option : D

Q.80 Which of the following statements best reflects a comprehensive layered design issue in computer networks?

Ans ☒ A. The design issues of addressing and error control are handled exclusively by the network layer, while flow control and sequencing are managed solely by the transport layer.

☒ B. Layered design primarily concerns selecting the physical transmission medium and ensuring minimal propagation delay across all layers.

☒ C. Each layer must handle key issues like addressing, error control, flow control, sequencing and data direction, ensuring reliable communication between entities without breaking layer abstraction.

☒ D. Once error control and sequencing are implemented at the data link layer, upper layers are exempt from such design considerations.

Q.84 Which of the following correctly represents the cofactor expansion of a 3x3 determinant along the first row?

- Ans ☒ A. Sum of each element of the first row times its corresponding cofactor
- ☐ B. Sum of only diagonal elements times their cofactors
- ☐ C. Sum of elements of the first column times their cofactors
- ☐ D. Difference of elements of the first row and their cofactors

Question ID : 4410092319372

Option 1 ID : 4410099121918

Option 2 ID : 4410099121920

Option 3 ID : 4410099121917

Option 4 ID : 4410099121919

Status : Answered

Chosen Option : C

Q.85 In a memory system with fixed-sized partitions, each holding one process (as in IBM OS/360 MFT). Which statement is correct?

- Ans ☐ A. Multiprogramming is unlimited
- ☒ B. Multiprogramming limited; internal fragmentation possible
- ☐ C. Each partition holds multiple processes
- ☐ D. Partition size adjusts dynamically

Question ID : 4410091358411

Option 1 ID : 4410095365796

Option 2 ID : 4410095365798

Option 3 ID : 4410095365797

Option 4 ID : 4410095365799

Status : Answered

Chosen Option : B

Q.86 Which of the following best describes the interaction between CPU and DMA during block transfer?

- Ans ☐ A. CPU and DMA alternate each word transfer over the bus
- ☐ B. CPU supervises every byte of transfer to ensure correctness
- ☒ C. CPU sends control information once, then DMA handles the transfer independently
- ☐ D. CPU transfers data to cache, DMA transfers it to I/O

Question ID : 4410091345122

Option 1 ID : 4410095313166

Option 2 ID : 4410095313164

Option 3 ID : 4410095313165

Option 4 ID : 4410095313167

Status : Answered

Chosen Option : C

Q.87 Which of the following best describes the relationship between pointers and 1D array declaration in C programming language?

- Ans ☒ A. The array name points to the first element, but is not a modifiable pointer.
- ☐ B. The array name and any pointer variable are interchangeable.
- ☐ C. The array name points to the last element of the array.
- ☐ D. The array name is a pointer variable and can be reassigned to a new address

Question ID : 4410092215468

Option 1 ID : 4410098718010

Option 2 ID : 4410098718011

Option 3 ID : 4410098718013

Option 4 ID : 4410098718012

Status : Answered

Chosen Option : A

Q.88 In SRTF (Shortest Remaining Time First) scheduling, which process is selected next?

- Ans ☐ A. One that arrives first
- ☐ B. One with the highest priority
- ☒ C. One with the shortest remaining burst time
- ☐ D. One with the longest burst time

Question ID : 4410091186159

Option 1 ID : 4410094678888

Option 2 ID : 4410094678890

Option 3 ID : 4410094678889

Option 4 ID : 4410094678887

Status : Answered

Chosen Option : C

Q.89 In an associative memory system, the key register holds:

- Ans ☒ A. The tag field used for parallel comparison.
- ☐ B. The control bits for memory timing.
- ☐ C. The memory address of the required data.
- ☐ D. The binary result of address decoding.

Question ID : 4410091385230

Option 1 ID : 4410095471661

Option 2 ID : 4410095471660

Option 3 ID : 4410095471662

Option 4 ID : 4410095471663

Status : Answered

Chosen Option : C

Q.90 Why is it considered good practice to close files explicitly even if the programming language runtime may close them at program termination?

- Ans ☒ A. To ensure the file remains hidden and cannot be reopened by others
- ☒ B. To protect the file from accidental deletion
- ☒ C. To guarantee file permissions are reset
- ☒ D. To release resources promptly and avoid resource leaks during execution

Question ID : 4410092215466

Option 1 ID : 4410098718002

Option 2 ID : 4410098718005

Option 3 ID : 4410098718004

Option 4 ID : 4410098718003

Status : Answered

Chosen Option : D

Q.91 Which operation in Relational Algebra is used to retrieve specific columns from a relation?

- Ans ☒ A. Intersection ($\cap$)
- ☒ B. Selection (σ)
- ☒ C. Cartesian Product ($\times$)
- ☒ D. Projection (π)

Question ID : 44100930927

Option 1 ID : 441009123199

Option 2 ID : 441009123196

Option 3 ID : 441009123198

Option 4 ID : 441009123197

Status : Answered

Chosen Option : A

Q.92 _____ is NOT a valid token typically generated by a lexical analyzer.

- Ans ☒ A. Parser
- ☒ B. Variable
- ☒ C. Compiler
- ☒ D. Keyword

Question ID : 4410091427603

Option 1 ID : 4410095638916

Option 2 ID : 4410095638915

Option 3 ID : 4410095638914

Option 4 ID : 4410095638917

Status : Answered

Chosen Option : A

Q.93 Which of the following best describes an empty set?

- Ans ☒ A. A set that has one element
- ☒ B. A set that contains zero as an element
- ☒ C. A set that has no elements
- ☒ D. A set that contains all elements from a given universal set

Question ID : 4410092319316

Option 1 ID : 4410099121696

Option 2 ID : 4410099121693

Option 3 ID : 4410099121694

Option 4 ID : 4410099121695

Status : Answered

Chosen Option : C

Q.94 What does a node in a singly linked list typically contain?

- Ans ☒ A. Data and one pointer
- ☒ B. A pointer only
- ☒ C. Data and two pointers
- ☒ D. Data only

Question ID : 441009260694

Option 1 ID : 4410091016194

Option 2 ID : 4410091016192

Option 3 ID : 4410091016193

Option 4 ID : 4410091016191

Status : Answered

Chosen Option : A

Q.95 If a measurement is recorded as 12.8 cm and the true value is 13.0 cm, what is the absolute error?

- Ans ☒ A. 1.2 cm
- ☒ B. 0 cm
- ☒ C. 0.2 cm
- ☒ D. 0.1 cm

Question ID : 4410092319380

Option 1 ID : 4410099121949

Option 2 ID : 4410099121950

Option 3 ID : 4410099121952

Option 4 ID : 4410099121951

Status : Answered

Chosen Option : C

Q.96 Which of the following correctly describes loopback addressing?

Ans ☒ A. Used for local LAN broadcast.

☒ B. Range from 127.0.0.0 to 127.255.255.255 used for internal host testing.

☒ C. Reserved for router multicast.

☒ D. Used to map private IP to public IP.

Question ID : 4410091441064

Option 1 ID : 4410095692922

Option 2 ID : 4410095692921

Option 3 ID : 4410095692923

Option 4 ID : 4410095692924

Status : Answered

Chosen Option : C

Q.97 A 32-bit IEEE 754 single-precision floating-point number is represented as:
0100 0001 0100 1001 0000 0000 0000 0000
What is the decimal value of this floating-point number?

Ans ☒ A. 100.5

☒ B. 50.25

☒ C. 12.5625

☒ D. 25.125

Question ID : 4410091434964

Option 1 ID : 4410095668396

Option 2 ID : 4410095668395

Option 3 ID : 4410095668393

Option 4 ID : 4410095668394

Status : Answered

Chosen Option : B

Q.98 Which of the following statements are TRUE about server and client side scripting in computer networks?

S1: PHP is used for server side scripting
 S2: HTML is used for database operations
 S3: CSS is used for server side scripting
 S4: ASP.NET is used for server side scripting

Ans ☒ A. Only S1, S2 and S4

☒ B. Only S2 and S3

☒ C. Only S1 and S4

☒ D. Only S1 and S3

Question ID : 441009324260

Option 1 ID : 4410091263268

Option 2 ID : 4410091263270

Option 3 ID : 4410091263269

Option 4 ID : 4410091263267

Status : Answered

Chosen Option : B

Q.99 The hardware organization of associative memory consists of:

Ans ☒ A. Memory Array Logic, Argument Register(A), Key Register(K) and Match Register(M)

☒ B. Argument Register(A), Memory Array Logic and Match Register(M) Only

☒ C. Memory Array Logic, Key Register(K) and Match Register(M) Only

☒ D. Argument Register(A), Key Register(K) and Match Register(M) Only

Question ID : 4410091329507

Option 1 ID : 4410095249580

Option 2 ID : 4410095249579

Option 3 ID : 4410095249578

Option 4 ID : 4410095249577

Status : Answered

Chosen Option : D

Q.100	What is the primary function of a Finite State Machine (FSM) simulator?
Ans	☒ A. To transform FSMs directly into digital circuit layouts
	☒ B. To convert FSMs into executable machine-level programs
	☒ C. To visually or textually test and analyze FSM behavior based on inputs and transitions
	☒ D. To reduce the number of states in FSMs without running them

Question ID :	441009909550
Option 1 ID :	4410093592085
